

Horses At The Show

While, to a great extent, farmers are turning more and more toward mechanical power in farming operations, many of them still regard their horses as a warm spot of affection for their old staid, the horse. This was very manifest around the arena at Victoria Park where the Horse Show held in Calgary, for the audience included a large number of farmers, who were lost in their appreciation of the splendid turnouts exhibited there. Who that ever had handled horses could hold his breath when witnessing the magnificent six-horse Oxleydale team entering flawlessly around the ring drawing a wagon, or the high skilled six Percherons, and lastly attached, whose leaders, in the excitement, caused two minor mishaps, by reason of crowding onto the boards, this was averted by skillful handling of the teamsters. Who could the host of trainers turned out from the feedlot be hoped to equal the great skill and experience of the teamster who performed over the jumps.

Bullish Blue exhibitions of riding were given by the ladies of the arena, among them Miss Doris Littlewood—who won the T. Eaton Co. trophy on "Ardenholme," her horse "Ardenholme," Miss Ina Stenning, and Miss Joan Gardner. The only rider using the old style ladies' riding was Mrs. Harvey, who gave a real riding exhibition in the family riding school, which included her horse, Deane, and husband, L. Col. F. M. Harvey, V.C., M.C. Another set of the ladies riding was given by Miss Mildred M. Soper. The use of the jumping classes had had luck, his smooth spraving class through one obstacle, but he came up for a fall by riding "Ditto" into second place for the hands jumping class.

A highlight of the show was the presence of a star performer from Vancouver, "High Time," owned and handled by Mrs. McQueen. His performance occurred in the evening at home on Friday evening, when the performer excited just before entering the ring he reared and fell backward in the only he was drawing and smothering it; fortunately, his driver escaped injury. Later, he gave a fine, high stepping exhibition under the saddle.

Special performances on Friday evening included the taking of jumps by "Susanna," an old timebroke, by a rider, without a rider. The veteran caused more amusement by starting to cause pain, instead of over, the horse. He eventually the jumping of old fellow gave a perfect display with quite unobtainable ease. Later, a team of Oxleydale horses, including a wagon, on which rode a piper performing at full tilt, gave an exhibition of control under harness in the ring. It was announced during the evening that livestock mail had exceeded the record of the past 50 years, with a total of \$127,752 cleared in the hands during the three day session. Of that amount, the Bull Sale was responsible for \$115,580.

Persistent Figures

Edmonton.—Registered ownership in Alberta numbered 7,238, according to figures received by the Registrar's office. There were 7,897 registered at the same date last year. Of the total, 5,000 were registered in Edmonton, while Calgary's figure is 2,298.

Calgary Castle For Sale

Let readers familiar with Alberta's ancient city as a justifiable wonder which building there may be described as a castle, we hasten to give an explanation. The following advertisement appears in a prominent London (Eng.) daily newspaper recently:

"I am desirous to be given a 'Calgary Castle,' which is for sale through the Department of Agriculture for £100,000 at St. Andrew House, Edinburgh. The property is situated in a beautiful and healthy locality, and is of prime residential value. It is set in grounds of 30 acres and is built in a style of architecture which is a masterpiece of the castle. The building includes stables, kennels, walled garden and wild life."

Feeding The Dairy Calf

Lathbridge Experimental Station, Wexley, Alberta.

The development of young animals is an important feature in all live stock production. In the case of the dairy calf, the "bringing up" process is particularly important, in view of the heavy demands which are usually made on the animal when it comes into production. The right start for the dairy calf is to be born under absolutely clean surroundings. When the calf is to arrive in a box stall, the proper use of disinfectants will minimize the danger of infection, whereas during the summer a clean pasture is quite satisfactory. The colouring of most calves of differentials will minimize the danger of infection, whereas during the summer a clean pasture is quite satisfactory. The colouring of most calves of differentials will minimize the danger of infection, whereas during the summer a clean pasture is quite satisfactory.

To teach the calf to drink, all that is necessary is a hungry calf, a little patience and some warm milk. After the calf has drunk it into a cup. Dip two or three fingers in the milk and let the calf suck them. Then gently direct the calf's head into the milk, avoiding too active perspiration. When it's calf has started to drink in this manner, the fingers may be gradually removed, and the calf will learn to drink freely from the pail.

A calf should contain all the necessary nutrients for the young calf, and should be fed until the calf is three to six weeks old, at which time the calf may be substituted gradually. For the first week, it is desirable for the calf to receive milk from its own mother only, but after this it may be replaced by milk from the herd. The first few days it is advisable to feed three times daily and to give only a small amount (15 to 20 pounds, or about 18 pints to a quart per feed). The amount fed should be increased gradually until the calf is receiving 10 to 12 pounds daily, depending on its size and condition. A rule followed by some dairymen is to feed one pound of milk daily for each 10 pounds of weight. The important points to remember are to keep all udders scrupulously clean, have the milk warm (80°F.), feed regularly and do not feed too much at a time.

Small amounts of hay and grain may be fed when the calf is a week old. For this purpose clean, bright alfalfa hay and whole oats are recommended. The hay should be fed in such amounts as will be readily eaten up, a handful or two of oats a day will be sufficient to start, but this may be gradually increased to 1½ to 2 pounds at two months of age. A little wheat bran mixed with the oats improve the ration to a certain extent. Clean water should be available to the calves at all times.

Dominion Bureau of Statistics

(March 28th, 1940)

Registrations of Births, Deaths and Marriages, February 1940

The Dominion Bureau of Statistics has announced the following figures for births, deaths and marriages during the month of February, 1940, in 17 of the provinces of Canada having populations of 10,000 and over.

Births registered in these times and places in February amounted 7,007, deaths 4,438, and marriages 3,052, as compared with 6,470 births, 4,070 deaths, and 2,811 marriages in February last year, showing increases of 4 per cent in births, 8 per cent in deaths, and 7 per cent in marriages, and a decrease of 6 per cent in deaths, with adjustments made for the number of days in the month.

Births registered during the two months of January and February, 1940, amounted 14,035, against 13,926, and marriages 6,103, against 6,170 marriages during the corresponding two months last year.

This completed three months of births, a decrease of 2½ per cent in deaths, and an increase of 5 per cent in marriages, when adjustments have been made for the number of days in the month.

First Term (reading paper): "I am desirous to be given a 'Calgary Castle,' which is for sale through the Department of Agriculture for £100,000 at St. Andrew House, Edinburgh. The property is situated in a beautiful and healthy locality, and is of prime residential value. It is set in grounds of 30 acres and is built in a style of architecture which is a masterpiece of the castle. The building includes stables, kennels, walled garden and wild life."

Emerging Social Order

(By W. J. CAMERON, of the First World Company)

Some things are better not discussed than others. It is a peculiar fact that the things which are better left unspoken are the things which are most likely to be talked about. In the past six years there has been a remarkable increase in the number of people who are talking about the things which are better left unspoken. This is a very curious thing, and it is one which is not likely to be talked about.

What is still going on in the field, there is a great deal of talk about it. It is a very curious thing, and it is one which is not likely to be talked about. It is a very curious thing, and it is one which is not likely to be talked about.

It is a pity that so much talk is not in a little way. It is a very curious thing, and it is one which is not likely to be talked about. It is a very curious thing, and it is one which is not likely to be talked about.

What would you say were the most signs of an emerging social order? It is a very curious thing, and it is one which is not likely to be talked about. It is a very curious thing, and it is one which is not likely to be talked about.

Small amounts of hay and grain may be fed when the calf is a week old. For this purpose clean, bright alfalfa hay and whole oats are recommended. The hay should be fed in such amounts as will be readily eaten up, a handful or two of oats a day will be sufficient to start, but this may be gradually increased to 1½ to 2 pounds at two months of age.

What Markings

Up to the first of April markings of wheat from the 1939 crop in the three prairie provinces totalled about 390 million bushels. As it may be noted, less than 10 million bushels will be required for seed for the year, it would seem that only 28 million bushels would be required. There will be a tendency to hold more wheat in view of war conditions, so that deliveries may be expected to be very light between now and next harvest.

Pool Makes Interim Payment

Farmers who delivered their wheat to the Alberta Wheat Pool, and this included those who had deliveries in excess of the 5,000 bushels which could be delivered to the Wheat Board, have now received a second interim payment on their deliveries, bringing the total now advanced to the pool by the Wheat Board, 70¢ per bushel. This payment was made by the pool was 56¢ N. 1 Northern at Port William.

The Health League of Canada

105 Third Street, Toronto, Ont.

Results From Periodic Health Examination

A certain group in whom periodic examination is made available as a matter of routine, have been found to experience a mortality only about one-half that of the general population in corresponding age classes. In 1914 a well-known insurance company decided to institute periodic health examinations of all its employees. Treatment is given only in emergency. The plan is also intended to help form a direct diagnosis, and then to place the individual at the disposal of the family physician where occasion arises. The employees receive a reminder once a year.

The members of the group number some 15,000, all clerical, and of the two-thirds are female and of a younger average age than the general population.

The practice of routine periodic examination not only lowers the death-rate very materially, but it provides a valuable source of reliable information not otherwise obtainable. Persons going to a medical man are more or less seriously ill, and therefore liable to be examined. Examination is not ill at all. But among the lot some will be found to have little more or less advanced.

The death among the 18,000 in 1938 amounted 65, and of these 28 occurred at age of 65 or over. This is equivalent to a crude death-rate of 0.1 death per 1,000 for persons aged 65 or over. The rate for 1938 was 9.5 per 1,000. The ratio of actual expected death in the group was about one-half that expected. In males below 35, the record was less than one-quarter of the expected death, and between ages of 35 and 75 the ratio was 1.0. The lowest ratio was recorded for accidents, which were about 20 per cent of the expected number.

The second lowest ratio was for tuberculosis, with actual death less than 30 per cent of the expected. The company involved has made a particularly strong drive against tuberculosis and most infectious chest examinations, including X-ray explorations, are made in every case. The resulting early diagnosis made has materially improved the prospects of cure. The third lowest ratio was recorded for diabetes, with one actual death, when 2.8 would have been expected. A similar ratio was observed for chronic nephritis. Although the experience has been mutually good and well worth the cost, the company involved has made a particularly strong drive against tuberculosis and most infectious chest examinations, including X-ray explorations, are made in every case.

With round work may be delayed somewhat owing to the late arrival of the mail. It is understood that crews are being organized for the purpose of making up on the construction projects.

HIGH SCHOOL HOCKEY

Since the hockey season of 1939-40 is definitely over, we present a summary of High School and District hockey.

Team	W	L	T	Pts.
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2

Standing of games played:

Team	W	L	T	Pts.
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2

The newly organized Delia Hockey Club has turned in a fine record, although the club did not begin until near the close of the season. This has been the first time in a long while that Delia has won a game.

Summary of games:

Team	W	L	T	Pts.
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2
Delia vs. Hinton	1	0	0	2

Both teams will be thankful the fact that they have been able to play hockey, and hope for even better sport next year.

Notice of Preparation of Assessment Roll

Village of Delia Assessment Roll, 1940

NOTICE is hereby given that the assessment roll of the Village of Delia for the year 1940, has been prepared and is now open for inspection at the office of the Village of Delia, within thirty days after the date of this notice, in order to give any person who desires to object to the entry of his name or that of any other person upon the said roll or to the assessment of any property, or to the assessed value placed upon any property, an opportunity to be heard on the date of this notice, before a commission in writing with the Secretary-Treasurer.

Dated this 11th day of April, 1940.

LESLIE STEPHENS,
 Secretary-Treasurer.

NEW SEED IS THE BEST!

An ancient agriculturist, Theophrastus, in 300 B.C., told us "New seed is the best." Then Aristotle, in 350 B.C., wrote "A good plan is to use new seed within thirty days after the date of this notice."

For some good seed, at moderate prices, see the nearest Seed Agent.

harvest. Meanwhile, since it is unlikely that work on the land will now be possible before May, the men who have failed advantage of the earliest season to start seeding operations, will be taking the least risk of an early summer frost, for the possibility of a late season may be much less.

Following the hard winter of 1900-07, last season was also almost white with snow. It was not until the middle of May that the snow melted, and the rain of May brought little benefit.

THE WAR SITUATION
By the dramatic stroke against Denmark and Norway, Germany has assured the question of the least meeting with the minds of most people as winter drew to its close and the coming days of spring were deemed fraught with tremendous possibilities.

The initiative, having been taken on the side of the Allies, has left to the Germans the task of the time and element of surprise has yielded its first fruits of success. German troops now stand advanced upon the Norwegian soil, and the German army, either driving these forces from prepared positions or to contain them therein without success from the British, is a matter for British and French speculation.

Speculation has centered upon the question of the German offensive, the Scandinavian countries were motivated by pressure of the Allied blockade, or rather upon the larger aspect of the German offensive, to be gained by a multiplication of submarine bases located within earshot of the coast of North America. The German offensive, however, is a matter for British and French speculation.

A community shipment of fifty calves raised north of Delia left on Tuesday of this week.

Mr. and Mrs. F. J. McFadden, who were visiting at the coast, returned home on Wednesday, April 3.

W. W. Scott attended the sale in Calgary and purchased a yearling Shorthorn bull, "Malmsey Marquis."

Bob, Battle, of the Crown Land Co., made a business trip to Calgary on Friday, April 5, returning the same day.

Mike Marshall left for Calgary on Friday, April 5, and returned the following Monday after taking a break at the Horse Show.

G. W. Kinloch, from Vancouver, B.C., who spent a few days visiting his mother and brother in Delia, was returned to his home.

Major and Mrs. J. L. Newman, who have been spending the week at Wainwright, returned to their home in Delia on Thursday.

With roads blocked and motor transportation out of the question, Sam Price, of the U.G.G. shipped a carload of corn to Delia last week, thus relieving a serious shortage of fuel.

Early April days continued very unseasonable, with light snowfalls falling in the morning and rain in the afternoon.

Kate, who was born in Delia, is now living in the city. She is a very pretty girl and is very popular.
